fluid passes through the slits (158, 156, 150) through the windows (154, 152, 148) and into the outflow lumen 132" (col. 26, lines 34-42). Applicant submits that blood would *not* flow between the "outer lumens 108, 110 and 112" and the "inner lumen 114" of Dae's device and induce turbulence in a free stream of blood based on such flow.

For at least the foregoing reason, each of independent Claims 1 and 16, as amended herein, is believed patentable over Dae and the remaining the art of record.

Dependent Claims 2-15 and 17-30 are believed to be clearly patentable for all of the reasons indicated above with respect to Claims 1 and 16, one or the other from which they depend, and even further distinguish over the cited references by reciting additional limitations.

It is respectfully submitted that all pending claims are now in condition for allowance and prompt review and issuance is accordingly requested. Should the Examiner be of the view that an interview would expedite consideration of this Amendment or of the application at large, request is made that the Examiner telephone the Applicants' undersigned attorney at (908) 518-7700 in order that any outstanding issues may be resolved.

Respectfully submitted,

  
Karin L. Williams; Registration No 36,721
